

Without MultiThreading v/s With MultiThreading

There is 3 times looping for serial execution from each class i.e., MyThread & MyThread2

Calls – MyThread t1= new MyThread (); t1. show ();

MyThread2 t2 = new MyThread2(); t2. show ();

But in Multithreaded class non serial execution of any statement of while loop takes. 100 times looping is done in each class (SEE no in figures)

t1. start (); t2. start ();

Cooking from MyThread

I am happy

MyThread

WhatsApp Chatting from MyThread2

I am sad

MyThread2

```
File Edit Selection View Go Run Terminal Help <</Ansh Vikalp >>
